

Review of Section 3.2 Changes in the Bay: Ocean and coastal acidification

Well written and informative, but I would like to see a little more specific information wrt Narragansett Bay. For example, should include a graphic showing daily pH changes at a station in the bay. Or perhaps reference the NRDC report that showed that Narragansett Bay is a vulnerable hotspot due to the clam harvesting.

Include a link to NECAN.

[www.necan.org](http://www.necan.org)

In general, I would like to see a better explanation to the nutrient enrichment connection.

In the box on page 1 describing the chemical changes, change hydrogen to hydrogen ions

Not sure you need to say non-controversial, perhaps say well established

Replace: extreme biologically with extreme biological
